

IsaMill Engineers

Job Description and Requirements

- Site experience is important, since we work very closely with our customers, operations and maintenance groups.
- Minerals processing experience highly desirable, as we offer package solutions for slurry handling, control, media systems etc.
- Experience can be variable – from 5 years to 35 years. What is important is that you want to work the way we work:
 - We are a small, dynamic, flexible team.
 - We have a flat, flexible structure, where everyone does “whatever it takes” to advance the technology and meet the customer’s needs. You will work in a variety of teams in a variety of roles.
 - We strive for a minimum of hierarchy, and a “politics free” work environment.
 - We provide a high level of service to our users – including process design, engineering design package, installation support, commissioning and post-commissioning support, maintenance and spare parts, ongoing improvement for each customer. We don’t just deliver a mill, we work with customers to make their application a success.
 - Remuneration is strongly linked to business success, and your contribution to the technology and the team.
